EDUCATION

EPFL – Swiss Federal Institute of Technology in Lausanne

Lausanne, Switzerland

M.Sc. in Data Science, Minor in Financial Engineering – GPA 5.36/6.00

Sep. 2024 – Expected Feb. 2027

- Coursework: Probability & Statistics, Stochastic Calculus, Time Series, Derivatives, Investments, Optimization for ML, Causal Inference, Algorithms

- Teaching Assistant in Probability & Statistics and in Introduction to Programming (Python), 2024–2025

B.Sc. in Computer Science & Communication Systems – GPA 5.23/6.00

Sep. 2021 – Jul. 2024

- Exchange year at Polytechnique Montréal, Canada, 2023–2024
- Academic mentor for a group of 15 first-year students, 2022–2023

AWARDS

- **1st place out of ~15 teams, Citadel Quantitative Workshop** (EPFL Forum, 2024). Three-hour challenge where teams answered probability and estimation questions and bet on their own answers according to their confidence.

RESEARCH & PROJECTS

MIT – Work Analytics Lab, Center for Transportation & Logistics

Cambridge, MA, USA

Visiting Student Researcher, Master's thesis

Aug. 2026 – Mar. 2027

- Studying the impact of AI on labour-market dynamics by modelling the evolution of occupational tasks as a Markov process, learned with graph neural networks over 500+ O*NET occupations
- Simulating AI shocks with a structural perturbation model that captures job creation, mobility and productivity

The Finance Association (EPFL) – Hedge Fund Team

Lausanne, Switzerland

Project lead – ML-based alpha ranking and portfolio construction

Feb. 2026 – Jul. 2026

- Built learning-to-rank models (XGBoost, LightGBM) that rank the 300 largest US stocks each month, tested walk-forward out-of-sample. Top-decile stocks beat bottom-decile stocks by 1.24% per month (Newey–West $t = 2.35$)
- A long-only portfolio of the 20 top-ranked stocks reached a Sharpe ratio of 1.18 after transaction costs, with a maximum drawdown of –34%. Co-wrote the project report

EPFL – PARSA Lab

Lausanne, Switzerland

Research project – ML for FPGA routing optimization

Feb. 2025 – Jun. 2025

- Analysed how net ordering drives congestion and path cost in FPGA routing, and developed ML methods to predict efficient net sequences, reducing routing-tree nodes by 15% on average

Polytechnique Montréal

Montréal, Canada

Research project – natural-language querying with LLMs

Jan. 2024 – May 2024

- Fine-tuned an LLM to translate natural-language questions into SPARQL, within an end-to-end pipeline on AWS evaluated on NASA JPL data

INTERSHIPS

Edmond de Rothschild

Geneva, Switzerland

Data Science Intern – Private Banking

Aug. 2025 – Feb. 2026

- Built a churn-prediction model (XGBoost) for ~10,000 private-banking clients, after extensive analysis and integration of transaction, client-interaction, relationship-network and portfolio-performance data
- Reached an AUC of 0.70. At the chosen threshold, 30% of flagged clients actually churned, about 3× the random rate
- Presented the results to the board, and the model is now being deployed to production

Getlink Group

Paris, France

Data Science Intern – Rail Operations

Jun. 2024 – Aug. 2024

- Performed a quantitative analysis of train operation data, modelling electrical energy consumption with OLS regression ($R^2 = 0.90$)
- Estimated each driver's impact from regression coefficients and confidence intervals, and showed that if all drivers adopted the behaviour of the top 10th-percentile performers, total energy consumption would fall by 5%

SKILLS & INTERESTS

- **Programming:** Python, SQL, Scala, Java, C
- **ML & data:** PyTorch, XGBoost, LightGBM, scikit-learn, pandas, statsmodels, NetworkX, Spark, AWS, Git
- **Languages:** French (native), English (fluent)
- **Interests:** mountaineering (Seven Summits project), piano
